

INVITES FOR THE SYMPOSIUM

Plant Health Diagnostics and its impact in Agriculture

20th January 2022

14:00h-17:00h
(CET Amsterdam time)

Plant Health Diagnostics is a key component on sustainable agriculture and forestry, and in phytosanitary legislation.

How does Plant Health Diagnostics actually contribute to current global society sustainability goals? What else should be done to ensure fitting, accurate and accessible diagnostics to farmers and ecologists? What are the major technical challenges lying ahead?

To celebrate its 10 year anniversary, ClearDetections is organising a dedicated symposium to Plant Health Diagnostics. A unique opportunity to gather different stakeholders in the field and foster discussions on this topic.

Register before January 16, 2022, to participate in this online event.
